The Transformer Advantage

Transformers have revolutionized NLP, demonstrating state-of-the-art performance across multiple NLP tasks

Contextual Understanding

Grasp context between tokens and sequences, enhancing their ability to generate coherent and relevant output for various tasks

Attention Mechanism

Positional Encoding

This file is meant for personal use by diegorosenberg@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Large Language Models

Large Language Models (**LLMs**) are powerful AI models trained on massive amounts of data to learn the complex patterns and rules of human language, allowing them to perform a wide variety of tasks

This file is meant for personal use by diegorosenberg@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Large Language Models (**LLMs**) are powerful AI models trained on massive amounts of data to learn the complex patterns and rules of human language, allowing them to perform a wide variety of tasks

Large

Trained on **large amounts of data** and have **billions of trainable parameters**

Language

Deals with text data (takes input in text and generates output in text)

Large Language Models

Large Language Models (**LLMs**) are powerful AI models trained on massive amounts of data to learn the complex patterns and rules of human language, allowing them to perform a wide variety of tasks

Large

Trained on **large amounts of data** and have **billions of trainable parameters**

Language

Deals with text data (takes input in text and generates output in text)

Model

Predicts the next **word/** sentence/ token

Expectations from Large Language Models

What to expect?

Good Articulation

Ability to express information coherently and fluently, ensuring clear communication through well-structured and understandable output

This file is meant for personal use by diegorosenberg@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Expectations from Large Language Models

What to expect?

Good Articulation

Ability to express information coherently and fluently, ensuring clear communication through well-structured and understandable output

General Knowledge

Possesses a vast repository of information gathered during training, enabling them to provide diverse and comprehensive knowledge across various topics

This file is meant for personal use by diegorosenberg@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Expectations from Large Language Models

What to expect?

Good Articulation

Ability to express information coherently and fluently, ensuring clear communication through well-structured and understandable output

General Knowledge

Possesses a vast repository of information gathered during training, enabling them to provide diverse and comprehensive knowledge across various topics

Creativity and Diversity

Capable of producing creative and diverse responses, adapting to different styles, tones, or perspectives based on provided specifications

This file is meant for personal use by diegorosenberg@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Expectations from Large Language Models

What NOT to expect?

Domain Knowledge

Lacks inherent domain-specific knowledge as they rely on the data they were trained on, which may not cover specialized domains comprehensively

This file is meant for personal use by diegorosenberg@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Expectations from Large Language Models

What NOT to expect?

Domain Knowledge

Lacks inherent domain-specific knowledge as they rely on the data they were trained on, which may not cover specialized domains comprehensively

Guardrails

Lack the ability to implement strict boundaries or ethical considerations, potentially generating inappropriate or biased content without constraints

This file is meant for personal use by diegorosenberg@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Expectations from Large Language Models

What NOT to expect?

Domain Knowledge

Lacks inherent domain-specific knowledge as they rely on the data they were trained on, which may not cover specialized domains comprehensively

Guardrails

Lack the ability to implement strict boundaries or ethical considerations, potentially generating inappropriate or biased content without constraints

Consistent Accuracy

May generate responses that sound plausible but are factually incorrect, leading to potential misinformation and misunderstanding.

This is known as

"hallucinations" in LLMs

Training of Large Language Models (LLMs)

Pre-training

Data

Large corpus of
internet data

In **Pre-training**, the model builds a foundational understanding of language from a vast amount of data, allowing it to generate coherent and contextually relevant responses

Similar to
pre-training
performed in BERT

This file is meant for personal use by diegorosenberg@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Training of Large Language Models (LLMs)

Data

Large corpus of internet data

Curated high quality input - output pairs

After pre-training, the model undergoes fine-tuning, where it is trained on a specific task using supervised (labelled) data

By providing the model with supervised data and guiding it toward the desired output, it adapts its pre-existing knowledge to perform better on the targeted task

Similar to fine-tuning performed in BERT

This file is meant for personal use by diegorosenberg@gmail.com only.

Training of Large Language Models (LLMs)

Data

Large corpus of internet data

Curated high quality input - output pairs

Ranking of prompt responses on quality

In this stage, the model receives feedback from human interactions or simulated environments to improve its performance

The model generates responses, and these responses are evaluated by humans or algorithms.

Feedback reinforces desirable behavior, helping the model adjust its parameters to generate better outputs

Evolution of LLMs

BERT (340M parameters)

First model to consider both left and right contexts of words simultaneously during pre-training

2018

GPT (117M parameters)

First model to be trained in a “generative” mode by masking portions of input text from left-to-right

The Need for Prompts

The Need for Prompts

What is a Prompt?

A stimulus that triggers a specific action or event

prompt

verb

verb: **prompt**; 3rd person present: **prompts**; past tense: **prompted**; past participle: **prompted**; gerund or present participle: **prompting**

1. (of an event or fact) cause or bring about (an action or feeling).
"the violence prompted a wave of refugees to flee the country"

Similar:

- cause someone to take a course of action.
"curiosity prompted him to look inside"

Similar:

2. encourage (a hesitating speaker) to say something.
"And the picture?" he prompted"

Similar:

- supply a forgotten word or line to (an actor) during the performance of a play.
- **COMPUTING**
(of a computer) request input from (a user).
"the online form prompts users for data"

Significance of Prompt Engineering

PROMPT

Write a blog post about the benefits of meditation for mental health, targeting a beginner audience and optimized for SEO

1

Control model behaviour

The prompt is designed to control the behavior of the LLM by specifying the topic, target audience, and optimization criteria.

2

Get constrained outputs

The prompt includes specific keywords and phrases, such as "meditation," "mental health," "beginner," and "SEO," which constrain the model's response to a particular domain and style.

3

Higher output quality

The prompt provides context and specifies the tone or style, which helps the model understand the task at hand and generate a high-quality response.

4

Automate LLM operations

The prompt can be used to automate various LLM operations, such as fine-tuning, evaluation, and deployment.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Limitations of Prompt Engineering

Naturally high sensitivity

LLMs can be sensitive to small changes in the prompt, which can significantly impact the output.

Common sense

Prompt engineering relies on the model's understanding of the prompt, which can sometimes lack common sense or real-world knowledge.

Need exception handling

LLMs requires careful consideration of exception handling to ensure that they generate appropriate responses for out-of-the-ordinary or unexpected inputs.

Debugging is hard

Debugging prompt engineering can be challenging due to the complexity of LLMs and the lack of interpretability in their decision-making processes.

Common Practices for Devising Prompts

This file is meant for personal use by diegorosenberg@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Broad strategies for prompt design

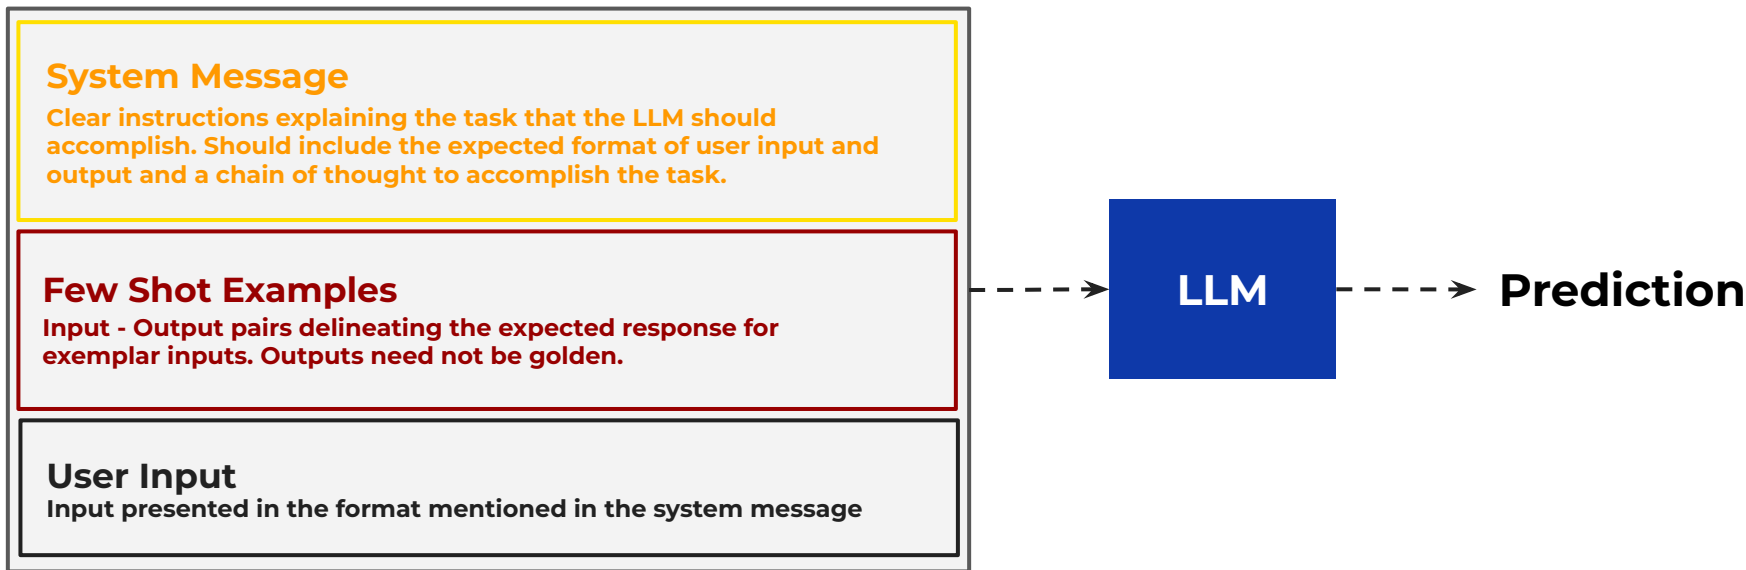

- 1** **template based prompts** Translate this sentence from french to english: <sentence>
- 2** **fill in the blank prompts** The first person to walk on the moon was ____
- 3** **multiple choice prompts** Here is a business scenario and list of constraints - given <A>, , <C> are possible solutions, which is the optimal solution and why?
- 4** **instructional prompts** Write me a sales pitch - 300 words - tone should be neutral - focus on ABC - address this first - talk about the price in the end
- 5** **iterative prompts** Start with a broad question / prompt and progressively work to refine it and bring out a detailed answer
- 6** **ethically aware prompts** Exception Handling to avoid answering certain questions / correcting the user when the input is biased or socially inappropriate
